ARAMIS is a workforce management and accreditation software. We have developed this web-based solution as a universal tool for different sports, exhibitions, concerts and other entertainment events. User-friendly interface, optimized search engine, export and import features bring the product additional efficiency. Technologies that were used, flexible interface, high availability of technical support staff make ARAMIS easily adaptable to customer requirements and applied work procedures.

Implementation

Formula 1 Grand Prix
Azerbaijan

Music
Festival

Youth Olympic
Festival

Border – is a software system, which integrates with systems of local mobile operators and serves the purpose of real-time monitoring of mobile devices connected to GSM-networks. In case of detection of a new device, Border initiates the process of enforced registration. As a rule, governmental institutions purchase this kind of system. Border has modular architecture and this allows it to be flexibly configured according to the requirements of the law and specificities of the mobile network infrastructure.

Implementation

Successful development of the Border system within the framework of **MDRS** project brought our company an honorary award by **The Ministry of Communication and High Technologies of Azerbaijan Republic**.

Out-of-the-box Solutions

OrangeLine, a software solution developed by our company, is a system meant for managing Call-center activities. It combines the following sub-systems: **IP-telephony**, **CRM** (Customer Relationship Management), **CCH** (Customer Complaints Handling) and **FAQ** (Frequently Asked Questions). **OrangeLine** will increase the quality and operational efficiency of your service, and thus will become your reliable assistant in managing your customer relationships.

Implementation

195 – Universal Call Center

Silkway Travel

Azerbaijan Railways

Zeytun Pharmaceuticals

Ministry of Education of AR

"Bildilçin" is noncommercial project, which serves the purposes of preserving the purity of our native language and its wide correct usage. This application is our modest attempt to strengthen national identity of our people and our voluntary contribution to State program on the use of the Azerbaijani language in conformity with the requirements of globalization and on the development of linguistics in Azerbaijan.

What is Iqlime?

With the help of Iqlime device you can monitor the temperature and humidity of the desired space on 24/7 basis, no matter where you are. The Iqlime will notify you via call or SMS when there is a change in temperature and humidity. You can monitor the index of the device, change settings, group devices, and analyze past performance via a mobile app or website.

Where Iqlime can be used?

- Greenhouses & warehouses
- Boiler Houses & Dwelling Houses
- Pharmacies & Markets
- Refrigerated trucks
- Server Rooms
- Other facilities that require special temperature & humidity conditions

Rebusta is an educational mobile game that will be equally interesting for both children and adults.

The game consists of many puzzles – rebuses. These puzzles, presented in the form of drawings, letters and symbols, contain words of the Azerbaijani language. The puzzles are based on different logic and have different levels of difficulty – this expands the player's intelligence and imagination. Rebusta not only promotes individual development, but also encourages the exchange of knowledge.

Colorful game design and artistic execution of puzzles give the game additional appeal.

Building Management System

kibrit

Building Management System (BMS) is a software-hardware solution, which integrates engineering systems of a building (such as lighting, water-supply, ventilation, air conditioning, etc.) for the purpose of centralized management and monitoring.

Which systems do we integrate?

- 1 Heating, Ventilation and Air Conditioning (HVAC)
- 2 Electrical power supply
- 3 Water supply
- 4 Lighting
- 5 Fire-alarm
- 6 Access control
